Ludwing Valdés Reyes

github.com/lilpne25-ui
Software Engineer · Backend & Enterprise Systems
Mexico

I turn manual, error-prone processes into software that runs every day. My plant integration cut the time to load an assembly into the ERP from 9 minutes to under 1.5, with every write verified. I work in Python, C#/.NET, TypeScript and SQL, connected to the ERPs and CAD tools a company already has.

EXPERIENCE

VLUX · Co-founder · Technology & product (personal project) — Aug 2026 – Present

- Architecture and development across four product lines: CRM, point of sale, industrial costing and quality management.
- Integrations with ERPs, CAD/PDM, legacy databases, messaging webhooks and devices.
- Release discipline: repositories, documentation, validation scripts and explicit feature status.

Industrial manufacturing company · IT & Systems — Sep 2024 – Aug 2026

- Designed, built and runs the CAD-to-ERP integration used by engineering and logistics on 6 workstations (see the first case).
- Built the attendance and overtime system that syncs biometric clocks with SQL Server and HR reports.
- Technical support across hardware, software and networks.
- Backups and information recovery; monitoring of network and servers.
- Installation, configuration and preventive maintenance of equipment and systems, including the network addressing plan.
- Technology support for the quality management system and its documentation.

SELECTED WORK

From a CAD assembly to a bill of materials in the ERP, in one click — In production · 6 workstations

Took a manual, error-prone transfer between engineering and the ERP and made it automatic, validated and about 6× faster end to end.

Python · PySide6 · C# / .NET 8 · SolidWorks API · Pervasive PSQL · SQL Server · pytest

A commercial CRM from first contact to after-sales — In operation · WhatsApp channel in pilot

Gave a B2B installation business one traceable flow from lead to quote, project and warranty, with web leads arriving automatically and no quote leaving without a person's review.

Next.js · React · TypeScript · Prisma · PostgreSQL · Zod · Vitest

Attendance and overtime, from biometric clocks to HR reports — In operation

Replaced manual handling of clock data with a synchronized database and rule-based overtime, so HR gets period reports in its own template instead of rebuilding them by hand.

C# · .NET 8 · WinForms · SQL Server · ZKTeco SDK · ClosedXML

- **Quality management system (ISO 9001)** (Demo · technical pilot). Electron · React · SQL Server
- **Real-estate operations prototype** (Commercial prototype). Next.js · TypeScript · Zod · Playwright
- **Point of sale on Odoo Community** (Pilot candidate). Odoo · PWA · Python

SKILLS

Backend & APIs	TypeScript, Node.js, C# / .NET, Python, REST APIs, Webhooks, Authentication & RBAC
Data & Databases	SQL Server, PostgreSQL, Prisma, Pervasive / Actian (ODBC), Data validation & migration
Frontend & Desktop	React, Next.js, Electron, WinForms, PySide6, Progressive Web Apps
Infrastructure & Practices	Networks & IP planning, Backups & recovery, Windows workstations & servers, Git & GitHub, Hexagonal architecture, Release smoke tests, Odoo Community
